Yekaterinburg, Russia

RESEARCH PROFILE

Current Master's student in Software Engineering at Ural Federal University with research interests in blockchain-based traceability systems, IoT/AI integration, and formal verification. My work focuses on the design of transparent and auditable digital governance systems, supported by research activity in blockchain and software systems.

EXPERIENCE

- **Department of Information Technologies and Control Systems, IRT-RTF**  Feb 2025 - April 2025
Yekaterinburg, Russia
Research and Project Practice Trainee
 - Conducted a review of scientific literature related to the research topic.
 - Studied blockchain, IoT, and digital traceability technologies.
 - Contributed to the conceptual architecture of a waste traceability system.
 - Prepared materials for a scientific article and the final qualification work.
- **Ministry of Digital Transformation, Innovation and Modernization of Administration**  Jul 2022 - Aug 2022
Nouakchott, Mauritania
Intern
 - Completed an internship within the Directorate of Development and Interoperability.
 - Carried out the internship under the theme "Public Services Management".
 - Gained practical exposure within a public-sector digital administration environment.
- **Coccinelle s.a.r.l**  Sep 2021 - Dec 2023
Nouakchott, Mauritania
Developer / Integrator of IT Solutions
 - Developed and integrated IT solutions.
 - Designed and maintained applications.
 - Analyzed client needs and proposed technical solutions.
 - Collaborated with project teams and contributed to performance optimization.

EDUCATION

- **Ural Federal University named after the first President of Russia B.N. Yeltsin** Aug 2024 - Jul 2026
Yekaterinburg, Russia
Master's Student in Software Engineering (09.04.04)
 - Educational Program: Development and Management in Software Projects.
 - Final weighted average: 91.46/100 — Excellent academic standing.
- **Institut Supérieur de Comptabilité et d'Administration des Entreprises (ISCAE)** 2020 - 2023
Nouakchott, Mauritania
Bachelor's Degree Studies in Computer Development
 - Overall average across validated semesters: 14.69/20

PROJECTS

- **Development of an Online Coworking Space Booking Service** 2025
Yekaterinburg, Russia
University Partner Project
 - Completed within the Master's educational program in Software Engineering
 - University partner / client: Brusnika LLC
 - Project level: increased complexity
 - Final evaluation: Excellent
- **Design Modules for the TargetFin_Grant_Platform Analytical Platform** 2026
Yekaterinburg, Russia
University Partner Project
 - Designed modules for an MVP platform supporting the management and moderation of regional project funding applications
 - Contributed to the architecture of a DSS module for application screening and expert selection
 - Worked on a machine-learning component based on fuzzy clustering for the analysis of submitted project applications
 - Supported investor-facing functionality, including project search, filtering, selection, and contact initiation
 - University partner / client: Donetsk State University
 - Final evaluation: Excellent.

- [S.5] Meissa, Y., and Kislitsyn, E.V. (2026). **A Blockchain-IoT Framework for End-to-End Traceability and Accountability in Municipal Waste Management: A Design Science Approach**. *Under review at International Journal of Networked and Distributed Computing*.
- [T.1] Meissa, Y. (2026). **Blockchain for Waste Lifecycle Traceability: A Permissioned and Formally Verified Framework for Circular-Economy Governance..** *Master's thesis, Ural Federal University*.

SKILLS

- **Programming Languages:** Java, Python, JavaScript, PHP, SQL
- **Frameworks & Web Development:** JEE Frameworks, PHP Frameworks, .NET, front-end development, web application development, application design and maintenance
- **UX & Front-End Design:** UX design foundations, front-end architecture development, user-centered interface design
- **Data & Intelligent Systems:** Machine Learning, Deep Neural Networks, Decision Support Tools
- **Database & Information Systems:** Advanced Databases, Information Systems Security, GIS-related systems, Windows Server, Data Management in SQL
- **Blockchain & Distributed Systems:** Blockchain-based systems, permissioned blockchain architectures, digital traceability, smart-contract-based governance logic, secure communication systems, data integrity
- **Research & Formal Analysis:** Scientific literature review, modeling and analysis of software systems, conceptual architecture design, formal methods for software and blockchain governance, scientific paper preparation

HONORS AND AWARDS

Best Graduate of Ural Federal University

2026

Ural Federal University

- Awarded the title "Best Graduate of Ural Federal University 2026" in recognition of academic excellence, research activity, and achievements in the Master's program

D.A. Pumpyansky Named Scholarship

Spring 2026

Ural Federal University

- Awarded for academic excellence and strong performance in the Master's program

UrFU Increased Scholarship for Scientific Activity

2026

Ural Federal University

- Awarded in recognition of scientific activity, research performance, and academic achievements

Excellent Student Badge (“Otlichnik Ucheby”)

August 2025

IRIT-RTF Ural Federal University

- Official academic distinction awarded for outstanding academic performance
- Recognizes sustained excellence and high achievement in the Software Engineering program

CERTIFICATIONS

• Deep Neural Networks in Python <i>Ural Federal University (OpenEdu)</i>	2026
• Digital Tools for Scientific Research and Academic Communication <i>Ural Federal University (OpenEdu)</i>	2025
• Intellectual Property Management <i>Ural Federal University (OpenEdu)</i>	2025

ADDITIONAL INFORMATION

Languages: Arabic (Native), French (C1), English (B2), Russian (B2)
Research Interests: Blockchain-based systems, digital traceability, distributed systems, formal verification, IoT-enabled governance, data integrity
Research Focus: Blockchain-IoT traceability systems, accountable digital governance, formal verification of distributed systems
